## **Vim Cheat Sheet**

Global	Editing	Macros	Working with multiple files	
:h[elp] keyword	<b>r</b> - replace a single	<b>qa</b> - record macro a	:e[dit] file - edit a file in a new buffer	
- open help for keyword	character.	<b>q</b> - stop recording macro	: bn[ext] - go to the next buffer	
:sav[eas] file - save file as	<b>R</b> - replace more than one character, until <b>ESC</b>	<b>@a</b> - run macro a	:bp[revious] - go to the previous buffer	
:clo[se]-close	is pressed.	<b>@@</b> - rerun last run	:bd[elete] - delete a buffer (close a file)	
current pane	<b>J</b> - join line below to the current one with one	macro	:b[uffer]# - go to a buffer by index #	
:ter[minal] - open a terminal window	space in between	Cut and paste	:b[uffer] file - go to a buffer by file	
<b>K</b> - open man page for	<b>gJ</b> - join line below to the current one without	<b>2yy</b> - yank (copy) a line <b>2yy</b> - yank (copy) 2	:ls or :buffers - list all open buffers	
word under the cursor	space in between	lines	:sp[lit] file - open a file in a new buffer and split window	
Cursor movement	<b>gwip</b> - reflow paragraph	<b>yw</b> - yank (copy) the characters of the word		
<b>h</b> - move cursor left <b>j</b> - move cursor down	g~ - switch case up to	from the cursor position to the start of the next	:vs[plit] file - open a file in a new buffer and vertically split window	
k - move cursor up	motion	word	:vert[ical] ba[ll] - edit all buffers as vertical windows	
l - move cursor right	<b>gu</b> - change to lowercase up to motion	<b>yiw</b> - yank (copy) word under the cursor	:tab ba[ll] - edit all buffers as tabs	
gj - move cursor down	<b>gU</b> - change to	yaw - yank (copy) word	Ctrl + ws - split window	
(multi-line text)	uppercase up to motion	under the cursor and the	Ctrl + wv - split window vertically	
<b>gk</b> - move cursor up (multi-line text)	cc - change (replace)	space after or before it  y\$ or Y - yank (copy) to	Ctrl + WW - switch windows	
	<b>C\$</b> or <b>C</b> - change	end of line		
<b>H</b> - move to top of screen	(replace) to the end of	lace) to the end of <b>p</b> - put (paste) the		
<b>M</b> - move to middle of screen	the line	clipboard after cursor	Ctrl + wx - exchange current window with next one	
L - move to bottom of screen	<b>Ciw</b> - change (replace) entire word	P - put (paste) before cursor	Ctrl + w= - make all windows equal height & width	
<b>W</b> - jump forwards to the start of a word	<b>CW</b> or <b>Ce</b> - change (replace) to the end of the word	<b>gp</b> - put (paste) the clipboard after cursor and leave cursor after	Ctrl + wh - move cursor to the left window (vertical split)	
<b>W</b> - jump forwards to the start of a word (words	<b>S</b> - delete character and substitute text (same as	<b>gP</b> - put (paste) before	<pre>Ctrl + wl - move cursor to the right window (vertical split)</pre>	
e - jump forwards to the	cl) S - delete line and	cursor and leave cursor after the new text	Ctrl + wj - move cursor to the window below (horizontal split)	
end of a word  E - jump forwards to the	substitute text (same as cc)	dd - delete (cut) a line	<b>Ctrl</b> + <b>wk</b> - move cursor to the window above (horizontal split)	
end of a word (words can contain punctuation)	<b>xp</b> - transpose two letters (delete and paste)	<b>2dd</b> - delete (cut) 2 lines	Ctrl + wH - make current window full	
<b>b</b> - jump backwards to	<b>u</b> - undo	dw - delete (cut) the characters of the word	height at far left (leftmost vertical window)	
the start of a word from the cu	from the cursor position	or position carried the star right (rightmost vertical window)		
<b>B</b> - jump backwards to the start of a word (words can contain punctuation)	changed line	to the start of the next word	Ctrl + wJ - make current window full width	
	Ctrl + r - redo	diw - delete (cut) word	at the very bottom (bottommost horizontal window)	
	repeat last command	under the cursor		
<b>ge</b> - jump backwards to		daw - delete (cut) word	Ctrl + wK - make current window full width	

the end of a word	Marking text (visual mode)	under the cursor and the space after or before it
<b>gE</b> - jump backwards to the end of a word (words can contain punctuation)	<b>V</b> - start visual mode, mark lines, then do a command (like y-yank)	:3,5d - delete lines starting from 3 to 5
% - move cursor to matching character (default supported pairs:	<b>V</b> - start linewise visual mode	:g/{pattern}/d - delete all lines containing pattern
'()', '{}', '[]' - use : h matchpairs in vim for more info)	• move to other end of marked area	:g!/{pattern}/d - delete all lines not
<b>0</b> - jump to the start of the line	Ctrl + v - start visual block mode	containing pattern
- jump to the first non-	<b>0</b> - move to other corner of block	<b>d\$</b> or <b>D</b> - delete (cut) to the end of the line
blank character of the line	<b>aw</b> - mark a word	<b>X</b> - delete (cut) character
<b>\$</b> - jump to the end of	<b>ab</b> - a block with ()	Indent text
the line <b>g_</b> - jump to the last	<b>aB</b> - a block with {}	>> - indent (move right) line one shiftwidth
non-blank character of the line	at - a block with <> tags	<< - de-indent (move left) line one shiftwidth
<b>gg</b> - go to the first line of the document	<b>ib</b> - inner block with () <b>iB</b> - inner block with {}	>% - indent a block with () or {} (cursor on brace)
<b>G</b> - go to the last line of the document	it - inner block with <>	<pre>&lt;% - de-indent a block with () or {} (cursor on brace)</pre>
500 or 50 go to line 5		
<b>5gg</b> or <b>5G</b> - go to line 5	Esc or Ctrl + c - exit	••
gd - move to local declaration	Esc or Ctrl + c - exit visual mode	>ib - indent inner block with ()
<b>gd</b> - move to local declaration	visual mode Visual commands	block with () >at - indent a block
<b>gd</b> - move to local	visual mode	block with ()
gd - move to local declaration gD - move to global declaration	visual mode Visual commands	block with () >at - indent a block
gd - move to local declaration gD - move to global declaration fx - jump to next occurrence of character x	visual mode  Visual commands  - shift text right	<pre>block with () &gt;at - indent a block with &lt;&gt; tags</pre>
gd - move to local declaration gD - move to global declaration fx - jump to next	visual mode  Visual commands  > - shift text right  < - shift text left  y - yank (copy) marked text	<ul> <li>&gt;at - indent a block with &lt;&gt; tags</li> <li>3== - re-indent 3 lines</li> <li>=% - re-indent a block</li> </ul>
gd - move to local declaration gD - move to global declaration fx - jump to next occurrence of character x tx - jump to before next occurrence of character x	visual mode  Visual commands  > - shift text right  < - shift text left  y - yank (copy) marked	<pre>block with () &gt;at - indent a block with &lt;&gt; tags  3== - re-indent 3 lines =% - re-indent a block with () or {} (cursor on)</pre>
gd - move to local declaration  gD - move to global declaration  fx - jump to next occurrence of character x  tx - jump to before next occurrence of character x  Fx - jump to the previous occurrence of character x	visual mode  Visual commands  > - shift text right  < - shift text left  y - yank (copy) marked text  d - delete marked text	<pre>&gt;at - indent a block with &lt;&gt; tags 3== - re-indent 3 lines =% - re-indent a block with () or {} (cursor on brace) =iB - re-indent inner</pre>
gd - move to local declaration  gD - move to global declaration  fx - jump to next occurrence of character x  tx - jump to before next occurrence of character x  Fx - jump to the previous occurrence of	visual mode  Visual commands  > - shift text right  < - shift text left  y - yank (copy) marked text  d - delete marked text  ~ - switch case  u - change marked text	block with ()  >at - indent a block with <> tags  3== - re-indent 3 lines  =% - re-indent a block with () or {} (cursor on brace)  =iB - re-indent inner block with {}  gg=G - re-indent entire
gd - move to local declaration  gD - move to global declaration  fx - jump to next occurrence of character x  tx - jump to before next occurrence of character x  Fx - jump to the previous occurrence of character x  Tx - jump to after previous occurrence of character x  ; - repeat previous f, t, F	visual mode  Visual commands  > - shift text right  < - shift text left  y - yank (copy) marked text  d - delete marked text  - switch case  u - change marked text to lowercase  U - change marked text	<pre>block with () &gt;at - indent a block with &lt;&gt; tags  3== - re-indent 3 lines =% - re-indent a block with () or {} (cursor on brace) =iB - re-indent inner block with {}  gg=G - re-indent entire buffer  ]p - paste and adjust</pre>
gd - move to local declaration  gD - move to global declaration  fx - jump to next occurrence of character x  tx - jump to before next occurrence of character x  Fx - jump to the previous occurrence of character x  Tx - jump to after previous occurrence of character x	visual mode  Visual commands  > - shift text right  < - shift text left  y - yank (copy) marked text  d - delete marked text  - switch case  u - change marked text to lowercase  U - change marked text to uppercase	<pre>block with () &gt;at - indent a block with &lt;&gt; tags  3== - re-indent 3 lines =% - re-indent a block with () or {} (cursor on brace) =iB - re-indent inner block with {}  gg=G - re-indent entire buffer  lp - paste and adjust indent to current line</pre>
gd - move to local declaration  gD - move to global declaration  fx - jump to next occurrence of character x  tx - jump to before next occurrence of character x  Fx - jump to the previous occurrence of character x  Tx - jump to after previous occurrence of character x  ; - repeat previous f, t, F or T movement  , - repeat previous f, t, F	visual mode  Visual commands  - shift text right  - shift text left  y - yank (copy) marked text  d - delete marked text  - switch case  u - change marked text to lowercase  U - change marked text to uppercase  Registers	<pre>&gt;at - indent a block with &lt;&gt; tags 3== - re-indent 3 lines =% - re-indent a block with () or {} (cursor on brace) =iB - re-indent inner block with {}  gg=G - re-indent entire buffer  ]p - paste and adjust indent to current line  Exiting</pre>
gd - move to local declaration  gD - move to global declaration  fx - jump to next occurrence of character x  tx - jump to before next occurrence of character x  Fx - jump to the previous occurrence of character x  Tx - jump to after previous occurrence of character x  ; - repeat previous f, t, F or T movement	visual mode  Visual commands  > - shift text right  < - shift text left  y - yank (copy) marked text  d - delete marked text  ~ - switch case  u - change marked text to lowercase  U - change marked text to uppercase  Registers : reg[isters] -	<pre>&gt;at - indent a block with &lt;&gt; tags 3== - re-indent 3 lines =% - re-indent a block with () or {} (cursor on brace) =iB - re-indent inner block with {}  gg=G - re-indent entire buffer  lp - paste and adjust indent to current line  Exiting :w - write (save) the file,</pre>
gd - move to local declaration  gD - move to global declaration  fx - jump to next occurrence of character x  tx - jump to before next occurrence of character x  Fx - jump to the previous occurrence of character x  Tx - jump to after previous occurrence of character x  ; - repeat previous f, t, F or T movement  , - repeat previous f, t, F or T movement, backwards } - jump to next	visual mode  Visual commands  - shift text right  - shift text left  y - yank (copy) marked text  d - delete marked text  - switch case  u - change marked text to lowercase  U - change marked text to uppercase  Registers : reg[isters] - show registers content  "xy - yank into register x	<pre>block with () &gt;at - indent a block with &lt;&gt; tags  3== - re-indent 3 lines =% - re-indent a block with () or {} (cursor on brace) =iB - re-indent inner block with {}  gg=G - re-indent entire buffer  lp - paste and adjust indent to current line  Exiting :w - write (save) the file, but don't exit :w !sudo tee % -</pre>
gd - move to local declaration  gD - move to global declaration  fx - jump to next occurrence of character x  tx - jump to before next occurrence of character x  Fx - jump to the previous occurrence of character x  Tx - jump to after previous occurrence of character x  ; - repeat previous f, t, F or T movement  , - repeat previous f, t, F or T movement, backwards	visual mode  Visual commands  > - shift text right  < - shift text left  y - yank (copy) marked text  d - delete marked text  ~ - switch case  u - change marked text to lowercase  U - change marked text to uppercase  Registers : reg[isters] - show registers content  "xy - yank into register	>at - indent a block with <> tags  3== - re-indent 3 lines  =% - re-indent a block with () or {} (cursor on brace)  =iB - re-indent inner block with {}  gg=G - re-indent entire buffer  lp - paste and adjust indent to current line  Exiting :w - write (save) the file, but don't exit  :w !sudo tee % - write out the current file

at the very top (topmost horizontal window) Diff **zf** - manually define a fold up to motion **zd** - delete fold under the cursor **za** - toggle fold under the cursor **ZO** - open fold under the cursor **ZC** - close fold under the cursor **zr** - reduce (open) all folds by one level **zm** - fold more (close) all folds by one level **zi** - toggle folding functionality **] c** - jump to start of next change [ **c** - jump to start of previous change do or :diffg[et] - obtain (get) difference (from other buffer) dp or :diffpu[t] - put difference (to other buffer)

:diffthis - make current window part of

:dif[fupdate] - update differences:diffo[ff] - switch off diff mode for

current window

editing code)	"+y - yank into the	(save) and quit	
<b>{</b> - jump to previous paragraph (or	system clipboard register "+p - paste from the	:q - quit (fails if there are unsaved changes)	
function/block, when editing code)	system clipboard register	:q! or <b>ZQ</b> - quit and throw away unsaved	
<b>ZZ</b> - center cursor on screen	<ul><li>Marks and positions</li><li>:marks - list of marks</li></ul>	changes	
<b>zt</b> - position cursor on top of the screen	<b>ma</b> - set current position for mark A	: wqa - write (save) and quit on all tabs	
<b>zb</b> - position cursor on bottom of the screen	<b>a</b> - jump to position of mark A	Search and replace /pattern - search for pattern	
Ctrl + e - move screen down one line (without moving cursor)	<b>y`a</b> - yank text to position of mark A	<b>?pattern</b> - search backward for pattern	
Ctrl + y - move screen up one line (without	<b>`0</b> - go to the position where Vim was previously exited	\vpattern - 'very magic' pattern: non-alphanumeric characters are interpreted as special regex symbols (no escaping needed)	
moving cursor)  Ctrl + b - move screen up one page (cursor to	" - go to the position when last editing this file		
last line)  Ctrl + f - move screen	- go to the position of the last change in this file	<b>n</b> - repeat search in same direction	
down one page (cursor to first line)	- go to the position before the last jump	N - repeat search in opposite direction	
Ctrl + d - move cursor and screen down 1/2 page	: ju[mps] - list of jumps	:%s/old/new/g - replace all old with new throughout file	
Ctrl + u - move cursor and screen up 1/2 page	Ctrl + i - go to newer position in jump list	:%s/old/new/gc - replace all old with new	
nsert mode - nserting/appending text	<b>Ctrl</b> + <b>o</b> - go to older position in jump list	throughout file with confirmations	
<b>i</b> - insert before the cursor	: changes - list of changes	:noh[lsearch] - remove highlighting of	
<b>I</b> - insert at the beginning of the line	<b>g</b> , - go to newer position in change list	search matches  Search in multiple files	
<b>a</b> - insert (append) after the cursor	<b>g</b> ; - go to older position in change list	<pre>:vim[grep] /pattern/</pre>	
<b>A</b> - insert (append) at the end of the line	Ctrl + ] - jump to the tag under cursor	{` <b>{file}</b> `} - search for pattern in multiple files	
• append (open) a new line below the current line		: cn[ext] - jump to the next match	
<b>0</b> - append (open) a new line above the current line		:cp[revious] - jump to the previous match	
<b>ea</b> - insert (append) at the end of the word	-	: cope[n] - open a window containing the list of matches	

**Ctrl** + **h** - delete the character before the cursor during insert mode

**Ctrl** + **W** - delete word before the cursor during insert mode

**Ctrl** + **j** - add a line break at the cursor position during insert mode

Ctrl + t - indent (move right) line one shiftwidth during insert mode

Ctrl + d - de-indent (move left) line one shiftwidth during insert mode

**Ctrl** + **n** - insert (autocomplete) next match before the cursor during insert mode

**Ctrl** + **p** - insert (autocomplete) previous match before the cursor during insert mode

**Ctrl** + **rx** - insert the contents of register x

## Ctrl + ox -

Temporarily enter normal mode to issue one normal-mode command x.

Esc or Ctrl + c - exit insert mode

:ccl[ose] - close the quickfix window

## Tabs

- : tabnew or
- :tabnew
- {page.words.file}

- open a file in a new tab

Ctrl + wT - move the current split window into its own tab

gt or :tabn[ext] move to the next tab

## gT or

:tabp[revious] - move to the previous tab

**#gt** - move to tab number #

:tabm[ove] #move current tab to the #th position (indexed from o)

:tabc[lose] - close the current tab and all its windows

:tabo[nly] - close all tabs except for the current one

:tabdo command run the command on all tabs (e.g.:tabdo q closes all opened tabs)
